Saving our Species project 2013-14 annual report card
Clandulla Geebung

Species attributes

Scientific name:	*Persoonia marginata*
NSW status:	Vulnerable
Commonwealth status:	Vulnerable
Management stream:	Site-managed

Photographer: J. Plaza

Overall project status*

- Populations at all key management sites are generally stable or increasing
- All management is being implemented as planned; too early to detect response to management at some sites
- Management at some sites requires review/amendment to ensure that the project is likely to meet its objectives
- Major review of / changes to the project required to ensure long-term objectives are likely to be met

*For SoS priority management sites (may not include all locations where the species occurs in NSW)

Project summary

Key management sites:	Clandulla State Forest
Action implementation:	3 of 3 actions were implemented as planned for the financial year (includes species population monitoring actions + other project actions fully or partially implemented)
Total expenditure:	$5,503 (cash and in-kind)
Project partners:	Office of Environment and Heritage

Management site 1: Clandulla State Forest

LGA: Mid-Western Regional

Project partners: Office of Environment and Heritage

Species population monitoring action

Reported trends are based on best available information

Estimated population	Population monitoring conducted	Conducted by	Trend
Unknown	Partial	Office of Environment and Heritage	Stable

Investment

This includes cash and in-kind contributions

Project participant	Investment
Office of Environment and Heritage	$5,503

Project actions

The project actions below are those identified as being required in 2013-14 to secure the species in the wild

Threat	Management/monitoring action description	Implemented as planned?
Habitat loss and degradation due to mining, forestry activities, trail construction/maintenance, and recreational activities.	Assess the condition of the species / species' habitat and evidence of the effects of degrading landuse practises	Partial
Habitat loss and degradation due to mining, forestry activities, trail construction/maintenance, and recreational activities.	Liaison with Forestry Corporation of NSW to write-in site management for this species.	Partial

Site summary

Significant work has been conducted on implementing site actions. Partial implementation of actions is due to challenges posed by the nature of the species (it is clonal and it is fairly widely distributed in a localised area) and the nature of the site (encompasses multiple land uses and a high level of public access). Initial activity has focused upon investigating and assessing monitoring methods appropriate to the species and site and working with the land manager. Surveys have been undertaken and rapid monitoring methods piloted, with stratification to consider future hazard reduction burns. The methodology is to be refined and implemented in full.
