

# STOP stormwater pollution

**ALL** the stormwater running off your site runs into the Cooks River. It is against the law to allow any material to run from your site and into the river. Here are some ways to help stop stormwater pollution at your workplace.

- **Ensure** all vehicles are washed in an area where soapy water cannot get into the stormwater drain. This could be a grassed area or a wash bay. If you have a licence for your wash bay from Sydney Water, make sure you know what it allows you to do.
- **Never** ever put oil, chemicals or dirty water down the toilet. It is illegal and could be very dangerous.
- **Never** ever put chemicals or dirty water into stormwater drains on or near your site. The minimum fine for this activity is \$750 for individuals and \$1500 for corporations, although deliberate acts like this are likely to attract a much higher fine.
- **Make sure** all your rubbish is placed in the bin and the bin is kept covered at all times. Make sure the bins are not kept anywhere near stormwater drains.

- Don't hose out workshop floors or hose the paved forecourts. Use a broom to sweep up wastes.
