

Saving our Species project 2014-15 annual report card

Budawangs Bush-pea

Species attributes

Scientific name:	<i>Pultenaea baeuerlenii</i>
NSW status:	Vulnerable
Commonwealth status:	Vulnerable
Management stream:	Site-managed

Photographer: J. Plaza/courtesy of Botanic Gardens Trust

Overall project status*

Stable or increasing population trend for all key management sites

Population trend not determined for some key management sites; too early to determine overall status

Decreasing population trend for at least one key management site; project review triggered

*For SoS priority management sites (may not include all locations where the species occurs in NSW)

Project summary

Key management sites:	Corang Trig; Bhundoo Hill; Translocation site; Mount Currockbilly
Action implementation:	1 of 1 actions were implemented as planned for the financial year (includes species population monitoring actions + other project actions fully or partially implemented)
Total expenditure:	\$350 (cash and in-kind)
Project partners:	Office of Environment and Heritage

Management site 1: Corang Trig

LGA: Palerang; Shoalhaven

No actions were implemented at this site during 2014/15, as it is still recovering from fire.

Management site 2: Bhundoo Hill

LGA: Shoalhaven

No actions were implemented at this site during 2014/15.

Management site 3: Translocation site

LGA: site to be selected

No actions were implemented at this site during 2014/15.

Management site 4: Mount Currockbilly

LGA: Palerang; Shoalhaven

Project partners: Office of Environment and Heritage

Species population monitoring action

Reported trends are based on best available information

Estimated population	Population monitoring conducted
50	N/A

Investment

This includes cash and in-kind contributions

Project participant	Investment
Office of Environment and Heritage	\$350

Project actions

The project actions below are those identified as being required in 2014-15 to secure the species in the wild

Threat	Management/monitoring action description	Implemented as planned?
Prolonged absence of fire may also affect populations if more productive species (e.g. Coral Fern) begin to dominate.	Inspect site where species occurred (and similar habitat) in spring and summer.	Yes

Site summary

A new subpopulation of about 30 plants was located.
