---

## Information Guide

### **About this Guide**

The Government Information (Public Access) (GIPA) Act (GIPA Act) gives members of the public an enforceable right to access government information and to encourage the proactive public release of information. Access to government information is restricted only where there is an overriding public interest against disclosure. The GIPA Act also requires agencies to prepare an Information Guide.

This Guide provides general information on:

- The structure and functions of the NSW Threatened Species Scientific Committee (NSW TSSC);
- The effect of the Committee's functions on members of the public;
- How the public can participate in the formulation of the NSW TSSC's policy and exercise of its functions;
- What kind of government information we have;
- What kind of government information we will make available to the public;
- How that information will be made available;
- If there is a charge to access specific kinds of information.

### **Committee structure and functions**

The NSW TSSC is established under the *Biodiversity Conservation Act 2016* (BC Act). The Committee is independent of the Department of Planning, Industry and Environment (DPIE), however DPIE provides office accommodation, funds and support staff to assist the Committee to fulfil its function under the Act.

The Committee consists of 11 Scientists appointed by the Minister for the Environment. The BC Act requires that members be nominated by various organisations and that members of the Committee must have expertise in one or more of the following areas of study:

- vertebrate biology
- plant biology
- plant community ecology
- aquatic biology
- population dynamics  
(including population viability analysis or evolutionary ecology).
- invertebrate biology
- terrestrial ecology
- limnology
- genetics of small populations

## NSW Threatened Species Scientific Committee

---

The current members of the NSW Threatened Species Scientific Committee are:

Chairperson: Dr Anne Kerle, Ecological Society of Australia  
Deputy Chairperson: Dr Rachael Gallagher, Macquarie University

Members:

Dr Stephen Bell, Ecological Society of Australia  
Professor Kristine French, University of Wollongong  
Professor Caroline Gross, University of New England  
Dr Richard Jobson, Royal Botanic Gardens and Domain Trust  
Dr Brad Law, Forest Science Centre, NSW Industry – Lands  
Dr Jodi Rowley, Australian Museum  
Mark Tozer, OEH  
Ken Turner, OEH

At the time of writing this Guide there is one vacancy on the Committee.

The principal functions of the Committee include:

- (a) determining which species and ecological communities are to be listed in the BC Act as critically endangered, endangered or vulnerable,
- (b) determining which species are to be listed as extinct species or species extinct in the wild,
- (c) determining which ecological communities are to be listed as collapsed ecological communities,
- (d) determining which processes are to be listed as key threatening processes,
- (e) periodically undertake a review of the lists of threatened species, ecological communities and key threatening processes,
- (f) advising the Minister on any matters relating to the conservation of threatened species and threatened ecological communities and key threatening processes that is referred to the Committee by the Minister.

*\*The phrase “Threatened species” includes species and ecological communities listed as critically endangered, endangered, vulnerable. Species includes all plants and animals except ‘fish’ as defined in the Fisheries Management Act 1994 and Fisheries Management Amendment Act 1997 and is not restricted to species of flowering plant or vertebrate animal.*

## Contact Details

The NSW TSSC is a part-time Committee and its members are drawn from various organisations and locations around NSW. The Committee can be contacted via the Committee's Secretariat as follows:

NSW Threatened Species Scientific Committee  
PO Box 1967  
HURSTVILLE BC NSW 1481

Telephone 02 9585 6940

Facsimile 02 9585 6606

Email: [scientific.committee@environment.nsw.gov.au](mailto:scientific.committee@environment.nsw.gov.au)

## **Effect of the Committee's functions on members of the public**

The functions of the Committee are directed towards the conservation and protection of biodiversity which benefits members of the public. Biological diversity or biodiversity is the variety of all living organisms including all species, the genes they possess and the ecosystems they form. Biodiversity is vital in supporting all life on earth. It provides food, many industrial products and medicines. Biodiversity also ensures clean air, water and fertile soils and provides opportunities for recreation and tourism for the public.

One of the most urgent and critical tasks in the conservation and protection of biodiversity is to identify those species under most threat so we can target our resources to prevent their permanent loss through extinction and promote their recovery for the enjoyment and benefit of current and future generations.

The species and ecological communities in NSW at most risk of extinction, are listed as threatened under the BC Act. It is the responsibility of the NSW TSSC to identify and list threatened species and ecological communities so they can be conserved and protected. The Committee also identifies key threatening processes that adversely affect species and ecological communities and can lead or contribute to their extinction.

The NSW TSSC makes final determinations to add or amend the lists of threatened species, ecological communities and key threatening processes in the Schedules of the Act. Once listed, the species, or ecological community is protected by legislation which contains provisions relating to their conservation. The listing of threatened species and ecological communities can affect certain activities undertaken by the public, for example:

- penalties for harming, picking, buying, selling and possessing threatened species or ecological communities or damaging their habitat.
- the requirement to obtain a licence to harm or pick threatened species or ecological communities or to damage their habitat.
- the requirement to assess whether a proposed development is likely to significantly affect threatened species or ecological communities.

## NSW Threatened Species Scientific Committee

---

- the possibility of the making of a stop work order or interim protection order where an action is likely to result in harming, picking or damage to the habitat, of threatened species or ecological communities.
- the possible declaration of an area of outstanding biodiversity value where an area makes a significant contribution to the persistence of threatened species or ecological communities.

The NSW TSSC also makes determinations to remove threatened species, ecological communities and key threatening processes from the Schedules of the BC Act. Once a species or ecological community is removed from the list, members of the public no longer face the same level of restrictions for threatened species but some restrictions to certain activities may continue to apply to protected species.

### **How the public can participate in the formulation of the Committee's policy and exercise of its functions**

Nominations for listing, delisting or making amendments to the Schedules of the BC Act may be made by any person or organisation. Following receipt and review of a nomination, the Committee considers whether additional information is required from the nominator or other sources such as research scientists, Government agencies and other organisations. The Committee may seek comment or further information from these sources.

When the Committee makes a decision on a nomination, the Committee makes a Preliminary Determination either to support or not support the nomination. This Determination is placed on public exhibition for comment from the public and also provides an opportunity for members of the public to provide any additional relevant information they may have. The Committee must consider all submissions received within the exhibition period.

### **What kind of government information we maintain**

The following information is held by the NSW TSSC:

- Policy documents which comprise:
  - Preliminary and Final Determinations,
  - Provisional listing on an emergency basis Determinations,
  - Determinations to make minor amendments to the Schedules of the BC Act.
  - Guidelines for interpreting listing criteria for species, populations and ecological communities under the NSW *Biodiversity Conservation Act, 2016*
- Documents relating to the internal administration and operation of the Committee
- Minutes of meetings
- Business papers
- Documents relating to Nominations which includes nominations, correspondence, data and submissions.

## NSW Threatened Species Scientific Committee

---

- Other reasonable requests for information the release of which would not raise any potential concerns in terms of public interest considerations against disclosure and would not involve a substantial amount of time and staff resources to provide.

The Scientific Committee reserves the right to impose conditions in relation to the use or disclosure of information that is released in response to an informal request.

### **Information available in response to a formal access application**

A formal access application may be made for all other information held by the NSW TSSC. The Committee will not release information if there is an overriding public interest against the disclosure of the information or the information falls within the definition or description of excluded information as specified under the *Government Information (Public Access) Act, 2009*.

There is a \$30.00 application fee and there may be an additional processing charge. If an applicant is seeking access to personal information about his/herself there is no processing charge for the first 20 hours.

The processing charge may be discounted by 50% where an applicant provides information and supporting documentation demonstrating that they are suffering financial hardship or where they can demonstrate the information is of special benefit to the public generally.

The Committee may also seek an advance deposit of up to 50% of the estimated processing charge. An advance deposit may be sought, for example, where a large volume of information is sought and/or significant resources are required to process an application. Applicants will have at least four weeks in which to pay the advance deposit and the period within which the application is required to be decided stops running until the advance deposit is received by the Committee.

Dr Anne Kerle  
Chairperson  
NSW Threatened Species Scientific Committee
