

S00143 – Alison Punton

Regarding Wombats being harmed or killed because they have built their home under some ones house or in an inappropriate place,I propose that the national parks and wildlife staff be called in to rehome the wombat into the appropriate national park These are native animals that often get a fungal disease that slowly kills them so we do not have too many wombats so we should save the ones we have.I propose for these wombats to be protected and laws made to support their protection in these situations.
