

S00109 – Roz & Kev Holme

The only thing I need changed is people running around treating mange wombats wrong !!

Wrong dose rates ,treating dog attacks as mange no one is keeping a eye on them Needs to be a wombat person very experienced to over look this I'm doing a big mange program here in wollombi , laguna yengo ,murrys run ,only to find people chucking everything over them when I ask dose rates they don't know ,weren't told what are u using ?they don't know only that it was handed out at a market , when I show them a dog attack which is always in murrys run (not wild dogs either ). They think it's mange very sad ! I think it needs to be done under a scientific lic/ and watched closely or the wombat suffers badly ,some we found frozen with oil in paddocks that had to be put down ,I had to do hard training to become a cert/4 vet nurse and even harder to get the wombat hospital running and help from a vet who I also pay !to help save wombats only to see people let Wombats suffer with so called carers /mop that have no idea it must be changed we work hard to save the wombats only to let fools kill them
