

S00023 – Sean Smith

I have left a previous comment regarding the requirement for s121 licenses for our company to obtain before removing possums. I'd like to add a note on this.

Within the past two weeks we have received multiple work orders to check roof space for possum activity and remove the possums.

We do the right thing by making them fill out the application and forwarding through to your branches before we can attend to inspection and remove anything.

This turned out to be a complete waste of the strata manager's time due to the fact when we attend it was rodents in the roof space not a possum.

So this is another reason we are against this law. please add to our last comments.
