22 December 2017

Dear Ms Coleman and Mr Causer

**RE: Development Application CP17-006 for coastal protection works at
Belongil Beach ("DA")**
Our ref: 282/2017

We act for the NSW Coastal Panel. We refer to the above DA.

To assist our client in its assessment of the DA, we request that you provide the following information:

1. a current survey indicating the heights of the current structure (the face of the wall "as is"), property boundaries, footprint of the proposed works and the current sand level;
2. any photographic and other information used to identify the nature and location of the existing structure(s);
3. further detail on the volume, nature and composition of rocks to be imported;
4. grading and specifications of the existing layer of primary armour stone;
5. details as to whether any rocks or other materials forming part of the existing structure are to be removed from the site;
6. confirmation that no works are proposed below 3m AHD;

7. confirmation that the crest height of the existing structure will not increase as a result of the proposed works;
8. details of works including the extent to which it is proposed to undertake works affecting the filter layer and secondary armour of the existing structure
9. confirmation that the proposed repairs will incorporate works above 3m AHD to a slope of 1.5H:1V, while the existing structure as shown includes only a single layer of primary armour at a flatter slope (less than 2H:1V) and of unspecified size and grading; and
10. diagram(s) indicating the footprint of the proposed works.

Could we please have your response to the above request by 29 January 2018.

Yours faithfully,

Andrew Beatty, Director

Ballanda Sack, Special Counsel
