MAKING A STENCIL

- Select a bracket on a house of similar character and scale.
- Place a large white card behind bracket.
- Trace outline with a pencil or thin felt tip pen.
- Make note of joinery details.
- Measure and record the depth of the individual members.
- This provides a full-scale accurate template from which an identical bracket can be fabricated by an experienced joiner.
- This method of making a stencil is also applicable for fretwork in brackets, valence boards and balustrades.
